This workshop aims to develop a theoretical and practical framework for the presentation of the most relevant and novel genetic approaches for the personalized diagnosis and treatment of cancer. In this workshop, relevant key opinion leaders will present the most updated strategies for cancer management, from immunotherapy to biomarkers, clinical trials and the standard of care of the most frequent solid malignancies.

Oriented to clinical oncologists and other medical professionals involved in cancer management, this workshop aims to be an update on the techniques and strategies, both at the laboratory and the clinical oncology setting. We are willing to receive you in Pamplona, for a fruitful learning based on clinical cases, presentations and discussion with leading experts in oncology at the I International Workshop on Genomic Testing in Cancer.
